ROCIC SPECIAL RESEARCH REPORT

Facial Recognition: Identifying New Leads

Innovations in facial-recognition technology are growing leaps and bounds, with the advancement of computing power and artificial intelligence, making suspect identification possible within minutes, and even seconds, from live-camera feeds or obscured and off-angle images via image-enhancement software. The potential scope of this technology for law enforcement extends from jail administration, patrol car and smartphone accessibility, and surveillance from CCTV throughout the world, to breaks in cold cases and major event security.

ROCIC SPECIAL RESEARCH REPORT

Fresno: Ideology and

Symbolism of a Mass Killer

On April 13, 2017, in Fresno, California, an unidentified black male suspect, later identified as Kori Ali Muhammad, shot and killed an unarmed security guard at a motel. When Muhammad learned from TV a few days later that he had been identified and was wanted by police, he went downtown and began a shooting spree. This was a killer who crafted his own unique brand of extremism.
